

As a resident of an underserved community, I would like to express my support for amending SB 176 to increase commercial solar caps from 50 to 100 Megawatts and Shared clean Energy facilities from 25 to 50 Megawatts. Not only is solar energy expansion and accessibility a good thing for the region and our planet, it keeps the source of energy local and more affordable to residents who are often over-looked and underserved. Thank you for supporting this amendment.

Sincerely,

Merle Potchinsky
